

Project Summary

◆ Sources Used

- Sales Data (Jan–Apr Excel files from folder)
- Employee Data (Excel)
- Product Category Data (for pivot/unpivot)
- Web source: Wikipedia (Country-wise population)
- Folder-based source using parameter (**FolderPath**)

◆ Transformations Applied

- Data cleaning (remove columns, rename, trim text)
- Fixed date format using **Change Type with Locale**
- Extracted Year, Month, Day, Quarter
- Created **Fiscal Month**
- Created **Full Name** column
- Created **Sales Category** (High, Medium, Low)
- Added Index columns (0-based & 1-based)
- Performed **Pivot & Unpivot**
- Merged Sales with Employee data
- Appended monthly files (Jan–Apr)
- Grouped by Region (Total Sales, Avg Sales, Transactions)
- Used **FolderPath parameter** for dynamic loading

◆ Challenges & Solutions

- Date errors → fixed using **Locale**
- Binary/Text errors → corrected steps
- Wrong parameter type → changed to **Text**
- Missing columns → rebuilt query properly

◆ Final Result

- Automated Power Query pipeline created
- Data loads dynamically from folder
- Refresh works with new files
- Clean and structured dataset ready
